

ProcureAI – Deployment Evidence

Team code PCNEI7FK · Problem statement: Supplier Comparison · Captured 2026-09-26

Live URL

- War Room: <http://47.129.120.76/>
- Health endpoint: <http://47.129.120.76/api/health>
- Example finished run (negotiated, replanned 2,000 → 5,000, PO generated):
<http://47.129.120.76/runs/run-75268093>
- Purchase order PDF for that run: <http://47.129.120.76/api/runs/run-75268093/po.pdf>

Health at capture time

```
{
  "mode": "live",
  "llm_gateway": "configured",
  "llm_backend": "openclaw",
  "openclaw": "reachable",
  "gateway": "reachable",
  "llm": "ok",
  "openclaw_tasks": ["draft", "explain", "explain_diff", "extract"],
  "guardrail_judge": "jev",
  "judge_model": "jev-1.13.0",
  "runs": 3,
  "runs_persisted": true
}
```

Infrastructure

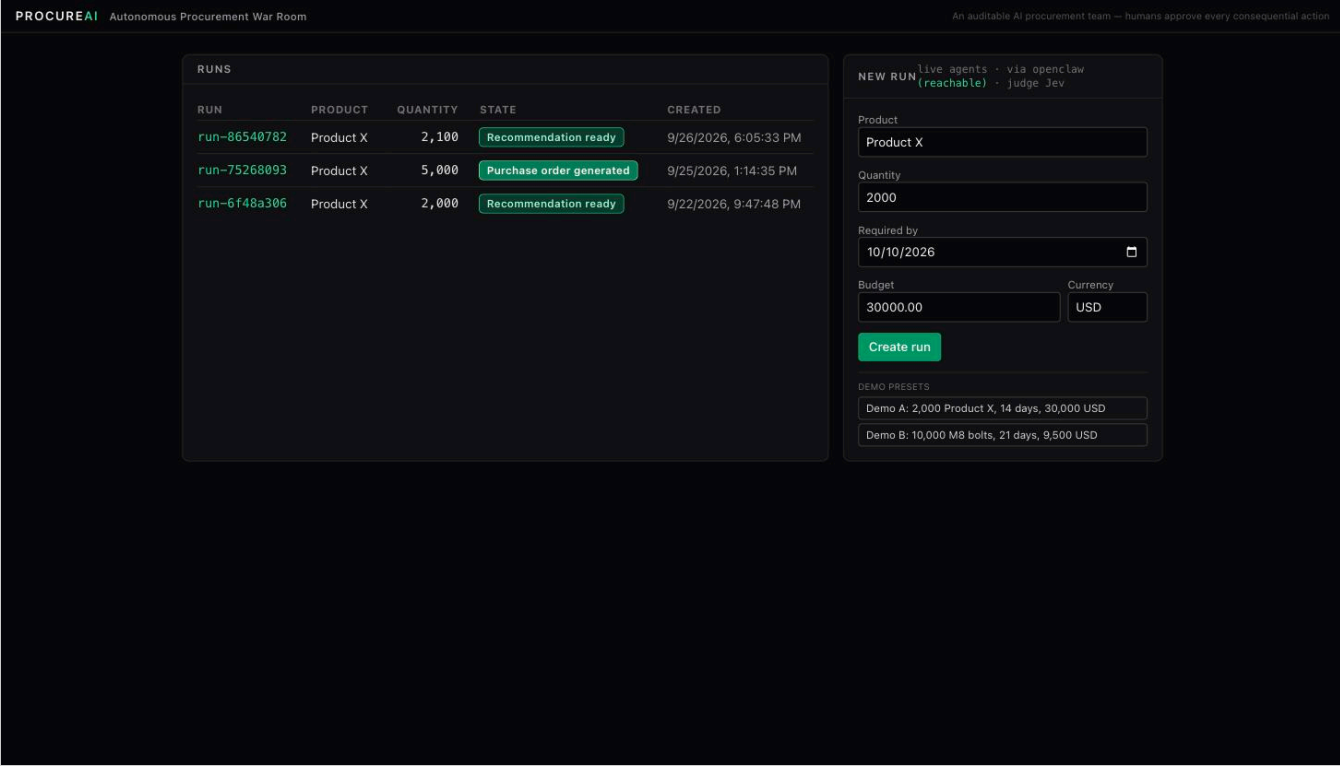

Item	Value
Host	AWS Lightsail, Ubuntu 24.04 LTS, 4 GB plan, region ap-southeast-1 (per sponsor starter kit)
Public IP	47.129.120.76 (port 80 via nginx; 8000 and 18789 loopback only)
Agent runtime	OpenClaw 2026.9.5, systemd user unit `openclaw-gateway.service`, provider = organiser AWS LLM gateway, model `sonnet4.5:latest` (Claude Sonnet 4.5 on Bedrock)
Dedicated agent	`agents.entries.procureai`, tools denied, no bootstrap, stateless per request
Backend	`procureai-backend.service` (uvicorn), `MODE=live`, `LLM_BACKEND=openclaw`, Jev judge, runs persisted under `data/runs/`
Frontend	Vite build served by nginx, `/api/` proxied with SSE-safe settings
Deploy	`scripts/deploy.sh` (just deploy); pre-flight `scripts/preflight.sh` (just preflight, 15 checks)
Drills	docs/DRILLS.md: 7 failure drills executed on this box (runtime down, model down, backend restart, bad uploads, instance reboot, interrupt with draft pending, scripted break-it sequence)

Screenshots (docs/screenshots/)

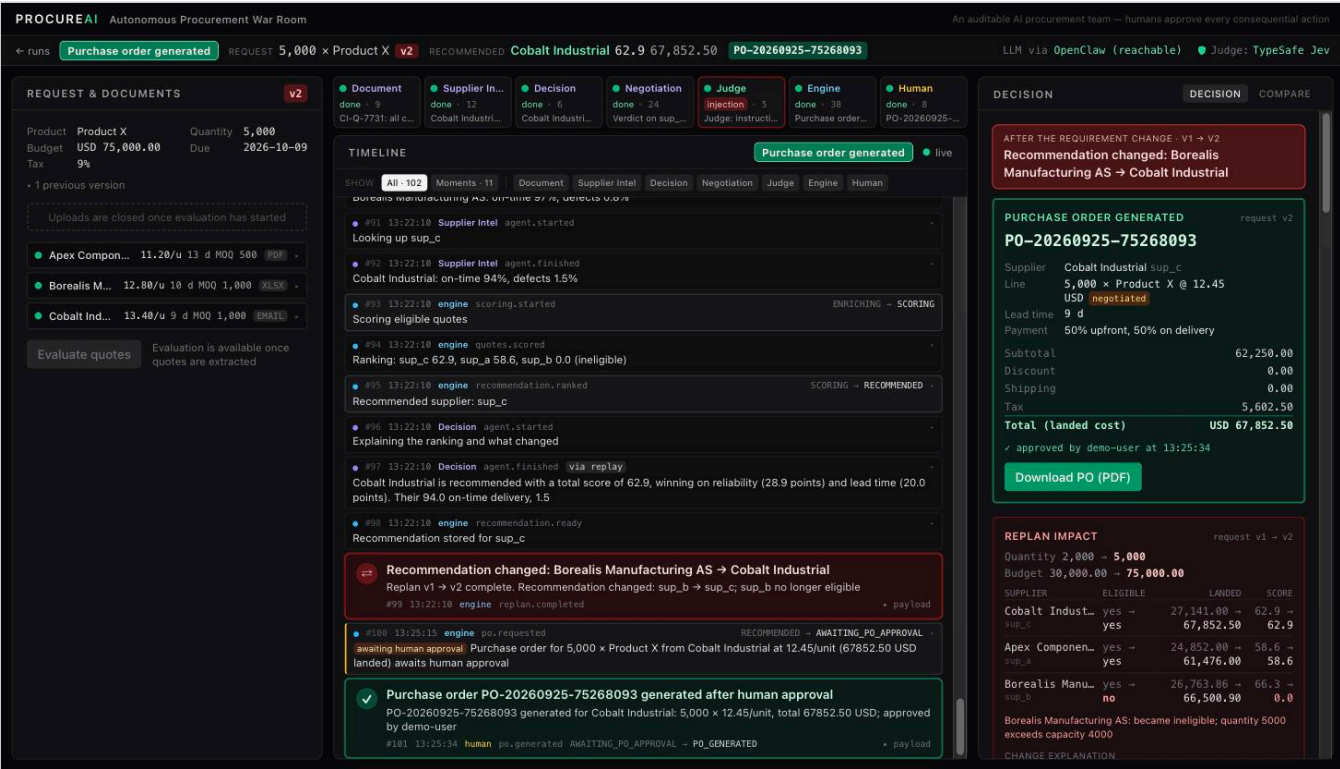

- `06-live-run-list.jpg` — run list on the live deployment, header "live agents · via openclaw (reachable) · judge Jev"
- `07-live-po-generated.jpg` — finished live run: lanes, timeline moments, replan impact, purchase order
- `01`–`05` — War Room stills of the extraction lanes, math gate, injection moment, replan moment and PO moment

Reproduce

```
just preflight          # all PASS against the box
just seed po            # drives a fresh run to PO_GENERATED on the box in ~1 s (cache warm)
just seed po --scenario b # the second scenario
```

Live run list, 2026-09-26.

Finished live run with the generated purchase order.
